

We have been working with the Program Integrity Unit at the MO HealthNet Division (MHD) to identify billing practices that reflect incorrect/inappropriate billing in Medicaid programs administered by DMH and MHD.

One of the issues we are looking at involves paid CPR or TCM claims on the same date that a psychiatric inpatient Medicaid claim was paid for a client. We want to take this opportunity to remind you of billing rules for clients receiving community based services (CPR/TCM) and Medicaid inpatient care on the same day.

CPR Services and Medicaid Inpatient Billing

For both Adults and Children/Youth enrolled in CPR:

If a client is hospitalized in an inpatient bed for treatment of a physical health care problem, Community Support services (H0036) may be billed, as clinically appropriate.

If a client is hospitalized in an inpatient bed for treatment of a psychiatric disorder, Community Support services (H0036) **may not** be billed to Medicaid during the hospitalization. However, it is expected that the Community Support worker maintain contact with the client during the hospital stay and address discharge planning concerns.

Community Support services, as clinically necessary, may be provided and billed to Medicaid on the day of admission and the day of discharge from a hospitalization in an inpatient bed for treatment of a psychiatric disorder.

TCM Services and Medicaid Inpatient Billing

For Adults receiving TCM services:

If a client is hospitalized in an inpatient bed for treatment of a physical health care problem, Targeted Case Management services (T1017xxxx) may be billed, as clinically appropriate.

If a client is hospitalized in an inpatient bed for treatment of a psychiatric disorder, Targeted Case Management services (T1017xxxx) **may not** be billed to Medicaid during the hospitalization. However, it is expected that the TCM worker maintain contact with the client during the hospital stay and address discharge planning concerns.

Targeted Case Management services, as clinically necessary, may be provided and billed to Medicaid on the day of admission and the day of discharge from a hospitalization in an inpatient bed for treatment of a psychiatric disorder.

For Children/Youth receiving TCM services :

If a client is hospitalized in an inpatient bed for treatment of a physical health care problem, Targeted Case Management services (T1017xxxx) may be billed, as clinically appropriate.

If a client is hospitalized in an inpatient bed for treatment of a psychiatric disorder, Targeted Case Management services (T1017xxxx) may be billed to Medicaid **only during the 30 days prior to discharge**

from the hospital. It is expected that the TCM worker maintain contact with the client during the hospital stay and address discharge planning concerns.

Targeted Case Management services, as clinically necessary, may be provided and billed to Medicaid on the day of admission and the day of discharge from a hospitalization in an inpatient bed for treatment of a psychiatric disorder.
